Cyberseniors: Active Ageing through ICT in Europe

“Cyberseniors: Active Ageing through ICT”, is an initiative co-founded by the European Commission under the Erasmus+ Program. A partnership coordinated by Fundación Cibervoluntarios (Spain) with 4 more partners: Age &Appoportunity (Ireland), Vienna Association of Education Volunteers (Austria), SYNTHESIS (Cyprus) and ANFMR (Romania). The main objective of Cyberseniors is to train people over 55 at risk of socio-digital exclusion in general, and in rural areas in particular, in the use of ICT tools that help them perform daily tasks in different areas: leisure, health, online banking, virtual communication, public administrations, etc., and how to use them safely.

Main goals of the program

• To provide continuous mixed learning to people over 55 on the use of useful ICT tools
• To fight loneliness and social exclusion of older people, especially those who reside in rural areas, highlighting the gender perspective.
• To raise awareness among older people about the safe use of the internet and digital applications.
• To create an innovative online multilingual training platform with open educational resources with pilot training activities in partner countries.
